PROFESSIONAL SUMMARY

Backend Developer with 1+ years of experience building production backend systems using Python, FastAPI, PostgreSQL, Redis/Celery and Docker. Experienced across secure authentication and RBAC, geospatial caregiver matching, recurring subscriptions and booking payments, server-side webhook verification, realtime SSE notifications, background jobs and third-party integrations. Designed and developed approximately 80% of the PicknCare backend and contributed approximately 50% of the REOS backend, while collaborating directly with frontend teams on web and mobile integrations.

TECHNICAL SKILLS

Backend: Python, FastAPI, REST APIs, GraphQL, API design, backend architecture, third-party API integration

Database & Caching: PostgreSQL, SQLAlchemy/ORM, relational schema design, Alembic migrations, Redis, MongoDB

Security & Auth: JWT, OAuth2, RBAC, endpoint authorization, Google Sign-In, Apple Sign-In

Payments & Webhooks: Stripe subscriptions, booking payments, Stripe webhooks, Apple in-app subscription verification, App Store Server Notifications

Async & Realtime: Celery, background tasks, Redis, Server-Sent Events (SSE), notification/event workflows

Maps & Matching: Google Maps APIs, bounding-box filtering, coordinate/radius matching, route-distance validation

DevOps & Media: Docker, GitHub, Bitbucket, Git, FFmpeg, HLS, Nginx, deployment support

PROFESSIONAL EXPERIENCE

Junior Backend Developer | Binaryburst Solution, Bhaktapur | May 2025 - Present

- Build and maintain production backend systems for care-service booking, real-estate CRM and travel-booking products.
- Design and develop backend features end to end: database architecture, ORM models, migrations, APIs, authorization, integrations, background processing, testing and debugging.
- Work in a two-member backend team and coordinate directly with frontend developers to integrate APIs across web and mobile clients.
- Use GitHub and Bitbucket for version control, collaboration, code review support and day-to-day backend delivery.

Core Tech: Python, FastAPI, PostgreSQL, SQLAlchemy/ORM, Alembic, Docker, Redis, Celery, SSE, REST APIs, JWT, OAuth2, GitHub, Bitbucket

SELECTED PROJECT EXPERIENCE

PicknCare | Backend Developer | May 2025 - Present

Project Link: pickncare.com

- Designed and developed approximately 80% of the backend for an American care-service platform supporting caregivers, careseekers, agencies and administrators.
- Designed PostgreSQL schemas, ORM models and Alembic migrations for users, roles, services, bookings, subscriptions, agencies, matching and notification workflows.
- Developed 25+ REST APIs across booking flows, subscription handling, caregiver requests, agency/service management and notifications.
- Implemented JWT/OAuth2 authentication, role-based access control, Google Sign-In and Apple Sign-In for secure account creation and login across multiple user roles.
- Built nearest-area booking matching using a staged geospatial flow: bounding-box prefilter, nearby coordinate/radius filtering, then Google Maps route/path distance validation for the closest practical matches.
- Integrated Stripe recurring subscriptions and booking payments, with server-side webhook verification and payment-driven subscription/booking side effects.
- Integrated Apple in-app subscription verification and App Store Server Notifications so the server can verify purchase/subscription state and apply entitlement side effects.
- Integrated Turn.ai for privacy-aware background verification, allowing the platform to evaluate criminal-record/background status without exposing unnecessary sensitive screening data.
- Built Celery/Redis background jobs and SSE realtime updates for booking/request status, notifications and longer-running workflows.

Tech: Python, FastAPI, PostgreSQL, SQLAlchemy, Alembic, REST APIs, JWT, OAuth2, RBAC, Google Maps, Stripe, Apple/Google Sign-In, App Store Server Notifications, Turn.ai, Celery, SSE, Docker, Redis

REOS / Real Estate CRM Platform | Backend Developer | April 2026 - Present

- Contributed approximately 50% of backend development for a multi-tenant real-estate CRM with agency-specific workflows and isolated agency data.
- Fixed business-logic defects across listings and deals, including status/lifecycle issues that affected core property and deal workflows.
- Resolved area and listing assignment issues so properties and service areas could be assigned to the correct agents under role-based access rules.
- Built a reusable notification service and SSE event layer for realtime updates, structured so additional channels such as WhatsApp can be added later without rewriting the notification core.
- Integrated Resend with agency-provided API keys so transactional email can be sent using each agency's own email configuration rather than a platform-owned sender.
- Developed REST and GraphQL APIs, ORM models and Alembic migrations for agency onboarding, property workflows and administrative operations.

Tech: Python, FastAPI, PostgreSQL, ORM, Alembic, REST APIs, GraphQL, RBAC, Resend, Celery, SSE, Docker, Redis

Rovers Nepal | Backend Developer | October 2025 - January 2026

- Developed backend modules for a trek and hotel booking platform, including trek/activity entries, hotel entries, booking management and inquiry handling.
- Secured admin and booking endpoints with JWT/OAuth2 and RBAC, and added rate limiting to public inquiry endpoints to reduce abuse.
- Implemented Celery background tasks and SSE realtime flows for status and notification updates.
- Developed 25+ REST APIs for public travel data, booking inquiries, trek/hotel management and admin workflows.

Tech: Python, FastAPI, PostgreSQL, ORM, Alembic, REST APIs, JWT, OAuth2, RBAC, Rate Limiting, Celery, SSE, Docker, Redis

TECHNICAL & ACADEMIC PROJECTS

Python HLS Streaming Platform | FastAPI | FFmpeg | HLS | hls.js | Docker | Nginx

- Built a Python-based video streaming pipeline that converts source videos into multi-quality HLS output using FFmpeg, with CPU and GPU/NVENC conversion modes.
- Served master playlists and HLS segments through FastAPI and built a browser player using hls.js with stream/quality discovery and manual quality selection.
- Containerized converter and serving services with Docker and configured the setup for local/home-network hosting from a laptop, including Nginx-based serving/proxy deployment.

Generative AI Legal Query Resolver | FastAPI | MongoDB | FAISS | Llama 2B | Selenium

- Built an AI-assisted legal query resolver using extracted legal documents as retrieval context.
- Processed legal documents with Selenium, stored structured content in MongoDB and implemented FAISS vector search for relevant-context retrieval.
- Developed FastAPI workflows for query processing, retrieval, prompt construction and Llama-based answer generation.

EDUCATION

B.Sc. CSIT | Asian College of Higher Studies, IOST, Tribhuvan University, Lalitpur | 2020 - 2025

+2 Science | National School of Sciences, Lainchaur, Kathmandu | 2018 - 2020

ADDITIONAL INFORMATION

Strengths: Backend debugging, problem solving, API/system design, end-to-end development, fast learning, cross-team collaboration

Languages: Nepali, English
